

STRETCH

Features:

Elasticity, Easy care,
Resistance, Comfort

Stretch yarns make it possible to create fabrics with high technical performance while maintaining a classic TASTE: they follow the body's movements for greater comfort and fit.

Specifically, the XLA yarn by Xlance® is a cotton yarn with an elastane core that allows for an easy-care finish with zero formaldehyde.

It can be heat-set at only 120°C, guaranteeing producers significant energy and cost savings and a considerable reduction in CO2 emissions.

When combined with cotton or Tencel, it makes the resulting fabric unique.

This fiber can therefore be used to obtain fabrics that are stretch, comfortable on the skin, durable over time, and also eco-sustainable.

YARN COUNTS: 40/1XTEN- 40/1XGOTS

ICONS: XLA C- XLA TEN
